Identified demand for a product feature that didn't exist, convinced Pinata Farms to build it, took it from zero to 55,000 downloads in 4 months, amassing over 112 million organic views. At 13 I made \$2,000 reverse engineering a market on a video game. At 18 I scaled a clothing brand to \$4k in monthly profit after noticing an unmet consumer avatar. Recently I took 9 stuck brands past 100k view videos for their first time by reading the culture they were selling into and creating content. USA bench press national record at 17.

Pinata Farms (Dec 2025-Pres 5mos)

- Identified demand on TikTok Organic for Fake News Pranks. Pushed product to create the feature.
- Built a TikTok search asset that ranked #1 organically, captured 10,000 downloads in the first month, and still drives daily downloads.
- Took existing AI Videos feature from 0 -> 11.5 million organic views in 5 days after finding the initial signal.

Charity Karaoke (Sep 2024-Pres 1yr 8mos)

- Increased donations 25% by adding a status element for attendees through shareable social media content.
- Created relationships with local business owners and leveraged giveaways to capture.
- Was featured in local news & raised over \$100,000 for local charities.

SocialLab (April 2023-Dec 2025 2yr 9mos)

- Built a team of 7 in college to launch an AI feature, killed it after poor early signals & pivoted to consulting.
- Took 9 stuck brands past 100k view videos by creating content that fit the culture they were selling into.
- Automated full AI content production pipeline for @success_archives in 2023 (Instagram)

Goofy Garments (Dec 2022-Apr 2023 5mos)

- Identified unmet demand in the clothing space for Gen Z humor, studied their behaviour, did GTM with viral Instagram content and took in \$2,000 by my second week.

Other experiences:

ex creator with 60,000 followers on TikTok. When I was 17 I held the USA bench press national record & squat state in California for my age and weight.

Personal skills:

Rapidly looking through data to find what I'm looking for.
Holding a massive amount of information in my head & acting creatively on it.
Moving extremely fast, keep/kill/iterate is in my DNA. I am lazy but I love following & finding signals.

Goal:

I want to do GTM/Growth across a portfolio.

Lifetime Stats:

Views: 350 million organic views across all socials

Revenue Generated: ~200k

Education:

University of Oregon (Business/Entrepreneurship, 1 year) · Harvard CS50

Current Details:

Location: Los Angeles, California.
